Rave Guardian and Rave Alert

Where safety meets mobile

Rave Guardian

Rave Guardian helps provide peace of mind and increased security by transforming users' BlackBerry® smartphones into personal safety devices. When triggered, the application automatically sends the user's picture, mobile number and personal information to campus police or other first responders.

- Helps provide peace of mind to all students, parents, faculty and staff
- Blankets the campus and surrounding area with a virtual blue light emergency phone
- Provides campus police with critical case information they wouldn't normally have

Rave Alert

Rave Alert provides an easy and effective way to send emergency notification and other important announcements via text messages, email, RSS feeds, and/or recorded voice messages.

- Users receive alert via text message, email, RSS feed and/or voice call – often within seconds of the administrator hitting "Send"
- Ensures timely delivery of messages by leveraging redundant, distributed alerting architecture with automated alert delivery monitoring
- Enrolls your entire campus community easily through a flexible combination of bulk upload capabilities, easy-to-use self-registration tools, and proven and customizable marketing templates.
